## Verification Protocol

### Verification Activity

**Protocol: Inspection and a review of development activity on the source code.**

Development activity can be used to provide insight into the project's progression, and the frequency of updates or modifications. This verification reports the number of commits per month for each asset connected to this escrow, recording changes made to the material at a specific point in time.

Monitoring commits assists in assuring that the deposited material reflects the current and active state of the software, offering beneficiaries a reliable measure of ongoing development and maintenance efforts.
